

Tending to Troy

Product Requirements Document (PRD)

Version 1.0

Tagline

Care for our home.

Vision

Tending to Troy is a private application built specifically for two people to care for their home together.

It is not intended to be a productivity platform, project management tool or corporate task manager.

Instead, it is a calm, beautifully designed household companion that stores every task, project, shopping item and note relating to the care of a home.

The application should feel like opening a premium household notebook rather than launching software.

Every feature should reinforce one simple philosophy:

A home is cared for continuously, not managed by deadlines.

Core Philosophy

The application deliberately rejects many conventions found in modern productivity software.

There are:

- No due dates.
- No deadlines.
- No productivity scores.
- No streaks.
- No gamification.
- No urgency notifications.

Instead, users simply organise tasks into four priority groups.

Priority reflects importance rather than time.

Users work through these priorities whenever they have time available.

The application should reduce mental load rather than increase it.

Users

Version 1 supports exactly two users.

Each user has equal permissions.

There are no administrator accounts.

Each user can:

- Create tasks.
- Edit tasks.
- Delete tasks.
- Archive tasks.
- Restore archived tasks.
- Pin tasks.
- Move priorities.
- Complete tasks.

Changes should synchronise almost instantly.

Primary Goal

Allow two people to remember everything required to care for a home without relying on memory or deadlines.

Success Criteria

The application succeeds if:

Users never wonder:

"I know there was something I needed to do..."

Instead they simply open Tending to Troy.

Home Screen

The home screen is intentionally minimal.

It contains four collapsible sections.

Priority 1

Priority 2

Priority 3

Priority 4

Each section displays a list of task cards.

Cards should have generous spacing.

Cards should resemble premium index cards.

Each card displays:

- Title
- Indoor / Outdoor badge
- Owner
- Shopping indicator
- Pin icon (if pinned)

Pinned tasks always appear first within their priority group.

Task Ordering

Within each priority:

Pinned tasks

↓

Remaining tasks

Manual drag-and-drop ordering

Users should be able to rearrange tasks naturally.

Task Detail Screen

Selecting a task opens a dedicated page.

Every task contains:

Title

Priority (1–4)

Owner

Tim

Wife

Anyone

Location

Indoor

Outdoor

Status

Active

Completed

Archived

Description

Unlimited formatted text.

Checklist

Unlimited checklist items.

Notes

Unlimited formatted notes.

Shopping List

Unlimited items.

Links

Unlimited links.

History

Display:

Created

Last edited

Completed

Archived

Rich Text

Description and Notes support:

Headings

Bold

Italic

Bullet lists

Numbered lists

Simple hyperlinks

No advanced document editing is required.

Checklist

Checklist items support:

Complete

Incomplete

Drag to reorder

Unlimited length

Shopping List

Each task may include shopping items.

Example

Decking Oil

Brushes

Sealant

Weed Killer

Shopping items can be ticked independently.

Version 1 stores shopping items only.

Price comparison will be introduced later.

Links

Users can save:

Instruction manuals

YouTube videos

Product pages

Helpful websites

Opening a link should use the device browser.

Weather

Only Outdoor tasks display weather information.

Weather should be intentionally simple.

Use the UK Met Office API.

If rain is expected now or very soon:

Display:

"Rain may make this task difficult."

Otherwise display:

"Weather suitable."

No weather radar.

No forecasts.

No AI interpretation.

No weather graphs.

The weather feature exists only to answer:

"Is today sensible for this job?"

Search

Users can search by:

Task title

Version 1 does not require note searching.

Task Lifecycle

Create

Edit

Move priority

Pin or unpin

Complete

Archive

Restore (optional)

Deletion should require confirmation.

Archived tasks remain searchable.

Pinning

Pinned tasks remain fixed at the top of their priority section.

Pinning should use a subtle brass skeuomorphic drawing pin.

The animation should resemble placing a drawing pin into paper.

Notifications

Version 1 deliberately has no notifications.

The application should never pressure users.

Authentication

Simple email and password.

Only invited users can join the shared home.

Future versions may support magic links.

Synchronisation

Changes should appear across both devices within seconds.

No manual refresh.

No save button.

Everything auto-saves.

Platform

Primary target:

Progressive Web App (PWA)

Requirements:

Works on iPhone

Works on Android

Installable from browser

Works like a native app

Responsive

Fast

Reliable

Automatic updates

Future versions may become native apps.

Performance

The application should open quickly.

Navigation should feel immediate.

Animations should remain subtle.

Target loading time:

Under two seconds.

Design Principles

The interface should feel:

Warm

Elegant

Quiet

Timeless

Intentional

Avoid:

Corporate styling

Bright colours

Overly flat design

Glassmorphism

Neon accents

Heavy gradients

Accessibility

Large touch targets.

Readable typography.

High contrast.

Support dynamic text sizing where practical.

Keyboard accessible on desktop.

Future Features

These are intentionally excluded from Version 1 but should influence the architecture.

AI-assisted shopping recommendations.

UK retailer price comparison.

Monzo integration.

Budget checking against upcoming bills.

House inventory.

Equipment register.

Manual library.

Photo attachments.

Recurring maintenance.

Apple orchard management.

Log cabin maintenance planner.

Multiple properties.

Export to PDF.

CSV backup.

Weather forecasts.

Offline editing.

Widgets.

Product Identity

Application Name

Tending to Troy

Tagline

Care for our home.

The application should feel like opening a beautifully crafted household journal that grows alongside the home for many years.

Every interaction should reinforce calm, ownership and care rather than productivity.
